COMPONENTS OF THE MIXER

EXTERNAL MIXER PUG MILL

The new generation of **iNOVA asphalt plants** brings together high performance in special mixes and components of the mixer that present high resistance to wear.

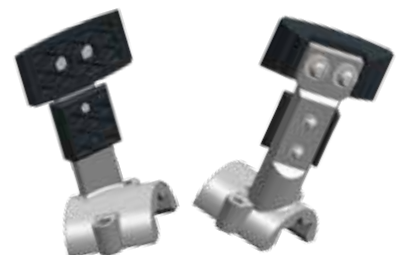

CIBER ORIGINAL HONEYCOMB PADDLE TIPS

The new generation of **Ciber Original HONEYCOMB Paddle Tips** increases **service life up to 5 times** in comparison with the conventional paddle tips.

CIBER NEW ORIGINAL ARMS

The new generation of arms has now additional protections. As a result, it is possible to achieve **up to three paddle tips replacements for each arm set**.

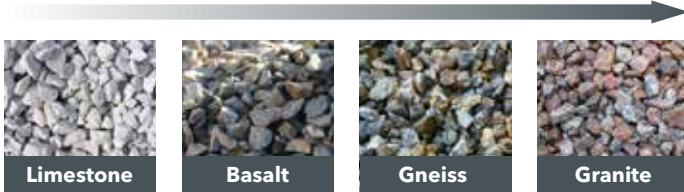

HONEYCOMB PADDLE TIPS

Paddle tips are components that are subject to the greatest exposure to abrasive material. **Resistance** to wear is the **focus of development for the** Ciber original **paddle tips** to ensure a better performance of the mixer.

More abrasive = More wear

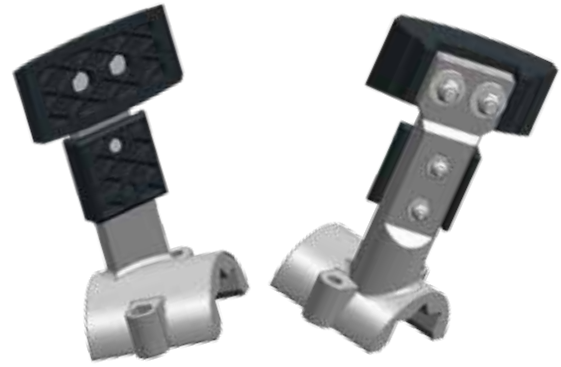

Whereas the new geometry of the face of attack in honey comb shape favors the creation of a **protective layer** by using the mixed material itself, the application of an innovative and thermally treated alloy results in **extremely hard carbides** and finely dispersed in the matrix, ensuring **high resistance to wear**.
